General information on Hafner products for explosion hazardous environment

Since July 1, 2003, devices and protective systems for use in explosion protection areas must be approved according to Directive 94/9 / EC - known as the ATEX Directive. This has been replaced by the latest ATEX 2014/34 / EU directive.

Essential when applying the ATEX directive:

- Non-electrical equipment (e.g. pneumatic actuators and valves) fall within the scope of application.
- Basic safety requirements are defined.
- The devices are divided into groups and categories, which in turn are assigned to corresponding zones. Zones are to be defined by the operator in accordance with ATEX directive 137.
- The CE mark is mandatory.
- Each device must be accompanied by an operating manual and a declaration of conformity.
- The directive also takes dust explosion protection into account.
- It applies to mining and all other potentially explosive areas

When and where can an explosion occur?

Explosions can always occur where flammable gases, liquids or dusts are produced, transported or stored. Under certain conditions, explosive mixtures arise in connection with air. In such potentially explosive areas, a small spark is often enough to trigger an explosion. Areas at risk of explosion can be found, for example, in chemical factories, refineries, tank systems, paint factories or sewage treatment plants and in other areas in which dust-forming bulk materials are processed or transported, e.g. in grain mills, feed mills and cement plants.

What are potential ignition sources?

Exemplary electrical ignition sources:	Exemplary mechanical ignition sources:	Other exemplary ignition sources:
• Sparking that occurs when contacts are opened • Electrical equalizing currents • Electrostatic discharge • Hot surfaces of coils	• Hot surfaces caused by friction • Adiabatic compression • Sparks generated by hitting	• Open fire • Overheating bearings or brakes • Self-ignition (exothermic compounds) • Lightning strike

Products subject to approval according to the ATEX directive

- Electrical equipment
- Non-electrical equipment such as:
 - Cylinders
 - Rodless cylinders
 - Valves
 - Hoses (must be antistatic)

This affects all devices that have their own potential ignition source (see above).

Products not subject to approval according to the ATEX directive

The following product examples do not have their own ignition sources and can be used in certain hazard zones in accordance with the manufacturer's instructions:

- Pneumatic accessories
- Mechanical accessories
- Air preparation units
- Fittings
- Check- and flow regulator valves

But: These devices must be protected from falling objects as well.

General information on Hafner products for explosion hazardous environment

2.14.1.2
page 281

Overview of product groups, categories and zones according to ATEX 2014/34 / EU and ATEX 137

According to the ATEX 2014 directive, the manufacturer must assess his products and label them accordingly:

- Divide into product groups and categories for use in different zones
- Divide into temperature classes
- Divide into explosion groups
- Determination of the permissible ambient temperatures

In accordance with ATEX 137, the system builder or operator must assess the system and define appropriate protective measures (e.g. in the context of an explosion protection document):

- Divide the system into zones according to the hazard potentials determined
- Determine temperature classes
- Determine explosion groups
- Determination of the occurring ambient temperatures

The plant manufacturer is responsible for ensuring that the selected components meet the requirements.

The ATEX directive differentiates between an electrical and non-electrical device.

Electrical devices are, for example, solenoid systems. Cylinders, valves and the mechanical part of the solenoid valves are considered as “non-electrical devices”.

Electrical and non-electrical devices are identified using the same scheme.

1. Example identification of a **non-electrical device**:

II	2G	Ex	h	IIC	T6	Gb	X
II	2G	Ex	h	IIC	T6	Gb	X

The two identifications differ only in terms of the type of ignition.

Example identification of an **electrical device**:

II	2G	Ex	e mb	IIC	T6	Gb	X
II	2G	Ex	e mb	IIC	T6	Gb	X

Gas atmosphere
Dust atmosphere

Product group

Equipment category / zone

Ex-identification

Ignition protection

Explosion group

Temperature class

Equipment protection level

Special conditions

In addition, the ambient temperature in which it is permitted to be used (e.g. $-10^{\circ}\text{C} \leq T_a \leq +50^{\circ}\text{C}$) is also printed on the products.

In the case of devices that have both markings, the respective lower Ex characteristic values shall be used.

In addition, a CE mark is mandatory.

HAFNER

General information on Hafner products for explosion hazardous environment

Product group:

Product group I

Products from product group I are distinguished between M1 and M2. Both are suitable for mining applications. They are not in our focus as Hafner does not offer suitable equipment.

Product group II

All other products for explosion hazardous environment are in this group.

Category:

Gas:

Dust:

Category I

An area in which an explosive mixture is continuously present or present for long periods > 1000 hours/year.

Category II

An area in which an explosive mixture is occasionally present 10 – 1000 hours/year.

Category III

An area in which an explosive mixture is not likely to occur in normal operation and if it occurs it will exist only for a short time < 10 hours/year.

General information on Hafner products for explosion hazardous environment

2.14.1.4
page 283

	Zones for Gases	Zones for Dust
Category 1	Zone O Area in which an explosion hazardous atmosphere consisting of air and inflammable gases, vapors or fog is present constantly or over a longer period of time. > 1000 hours/year	Zone 20 Area in which an explosion hazardous atmosphere consisting of a dust-cloud or a mix of air and dust is present constantly or over a longer period of time. > 1000 hours/year
Category 2	Zone 1 Area in which there is a probability that under normal conditions an explosion hazardous atmosphere consisting of air and inflammable gases, vapors or fog can be present. 10 – 1000 hours/year	Zone 21 Area in which there is a probability that under normal conditions an explosion hazardous atmosphere consisting of a dust-cloud or a mix of air and dust can be present. 10 – 1000 hours/year
Category 3	Zone 2 Area in which once and a while an explosion hazardous atmosphere consisting of air and inflammable gases, steam or vapors can be present. < 10 hours/year	Zone 22 Area in which once and a while an explosion hazardous atmosphere consisting of a dust-cloud or a mix of air and dust can be present. < 10 hours/year

☐ Covered by the Hafner product range

Comparison of product category according to ISO 2014/34/EU with product category according to EN ISO 80079-36:

EN ISO 80079-36		Directive 2014/34/EU	
EPL	Group	Product group	Category
Ma	I (Mining)	I (Mining)	M1
Mb			M2
Ga	II (Gas)	II (Non-mining applications)	1G
Gb			2G
Gc			3G
Da	III (Dust)		1D
Db			2D
Dc			3D

Ignition protection (examples):

	General definition:	For Hafner products:
c	Constructional safety	general protection for mechanical ATEX
i	Intrinsic safety	called ia for solenoids
na	Non sparking	
mb	Encapsulation	with cable
me	Encapsulation enhanced safety	called Ex emb with junction box
d	Flameproof enclosure	with junction box
dm	Flameproof encapsulation	with junction box

General information on Hafner products for explosion hazardous environment

Explosion group

Depending on the type of protection, explosion-protected equipment for gases, mists and vapours is divided into three explosion groups (IIA-IIB-IIC). The explosion group is a measure of the ignition transmission capability of gases (explosive atmosphere). The requirements on the equipment increase from IIA to IIC. Consequently, products classified IIC/IIIC can also be used in IIB/IIIB and IIA/IIIA.

Gas group device	Use in gas groups	Example	
IIA	IIA	Propane	Danger increases
IIB	IIA + IIB	Ethylene	
IIC	IIA + IIB + IIC	Hydrogen	

Temperatur classes:

Flammable gases and vapours are divided into temperature classes in accordance with their flammability. The ignition temperature is the lowest temperature of a heated surface at which the ignition of a gas/air or vapour/air mixture occurs. In other words, it is the lowest temperature value at which a hot surface can ignite the corresponding explosive atmosphere.

The maximum surface temperature of electrical equipment must always be lower than the ignition temperature of the gas/air or vapour/air mixture in which it is used.

Equipment of a higher temperature class (e.g. T6) can therefore also be used for lower temperature classes (T1-T5).

Temperature class	Temperature range of the mix (°C)	Max. surface temperature (°C)	Typical gases
T1	≥ 450°C	450°C	Methane, acetone, ammonia, methanol, propane, acetic acid, town gas, hydrogen
T2	≥ 300 - 450°C	300°C	Ethylene, acetylene
T3	≥ 200 - 300°C	200°C	Petroleum, diesel, heating oils, hydrogen sulphide
T4	≥ 135 - 200°C	135°C	Acetaldehyde, ethyl ether
T5	≥ 100 - 135°C	100°C	
T6	≥ 85 - 100°C	85°C	Carbon disulphide

Temperature classes, heating of the devices and ambient temperature

On non-electrical devices, the temperature range in which the devices can be operated must be specified. The ambient temperature range is marked by "Ta." on any Hafner solenoid valve (example):

 II 2 G Ex h IIC T6 Gb
 -10°C ≤ Ta ≤ +50°C

 II 2 D Ex h IIIC T80°C
 Db -10°C ≤ Ta ≤ +50°C

On electrical and non-electrical devices, the maximum surface temperature is also specified. For gas atmosphere as temperature class, for dust atmosphere as absolute temperature [°C]. The temperature specification for dust is 5 °C below the maximum temperature of the temperature class.

 II 2G Ex e mb IIC T6 Gb
 II 2D Ex tb mb IIIC T80°C Db

General information on Hafner products for explosion hazardous environment

2.14.1.6
page 285

If the permissible ambient temperature range is not printed on the device, you can find it in the instructions and declaration of conformity.

Please note that solenoid valves can have a different ambient temperature range and maximum surface temperature for the valve body (non-electrical part) and the solenoid system (electrical part).

The user is limited by the lower values for the ambient temperature. The highest specified maximum surface temperature represents the relevant restriction for the application.

Example: valve has T6 imprint, coil T4. Then T4 counts.

Products without an own potential source of ignition

For products without an own potential source of ignition, Hafner issues separate ATEX declarations. These products are not marked in terms of the ATEX directive, but an ignition risk assessment has been carried out.

HAFNER Pneumatika Kft.
H-9228 Halászi, Püski út 3.
www.hafner-pneumatika.com
ertekezes@hafner-pneumatika.com

ATEX DECLARATION FOR BLOCK FORM FLOW REGULATORS

The company **HAFNER Pneumatika Kft.**, as manufacturer hereby declares that the products

block form flow regulators (type number: DRN...)

may not be put into service before the system in which it will be incorporated is declared to comply with the provisions of the European directive 2006/42/EC about the Safety of Machines, and with the regulations transposing it into national law.

According to the directive 2014/34/EU, Article 1 and Article 2, these products do not fall under the scope of the ATEX directive, because they are not capable of causing an explosion through their own potential sources of ignition.

So, these products are not marked in terms of the ATEX directive. An ignition risk assessment has been carried out.

If the installation regulations for devices and facilities in potentially explosive atmospheres and areas are compiled with (e.g. ISO 80079-36, EN 60079-14, EN 61241-14), the equipment can be used as following:
Group II, Category 2, Gas (II 2 G): for Zones 1, 2, in explosion group IIC.
Group II, Category 2, Dust (II 2 D): for Zones 21, 22, in explosion group IIIC.

Permitted temperature class: T6.
Allowed ambient temperature: -10°C ≤ Ta +50°C.

Important notes:

- The installation regulations valid in the designated country of use are to be observed.
- Dust deposits are to be removed regularly.
- The installation and operation instructions provided by the manufacturer are to be considered compellingly.
- Compressed air must be produced outside of the hazardous area.
- The use of any flammable or explosive flow medium is not permitted.
- Changing of the above-mentioned products is not permitted.
- Connect conductive metal parts together for potential equation and ground the entire system.
- If the above-mentioned products are built-in in a higher-level machine / tool / equipment, the risks of this machine / tool / equipment have to be assessed by the manufacturer of the higher-level machine / tool / equipment.

* dual use valves can either be used in-line or on a manifold plate.
** all ports in plate

Solenoids are described on page 2.14.3.2.4.

Delivery contains valve with the appropriate operator system, coil, manual and declaration of conformity.

ATEX-approved valves – Ex m – standard temperature range – stainless steel

2.14.3.2.2
page 290

Material: Stainless steel, 316L 
Zone: 1, 2, 21, 22
Temperature range: -10°C ... +50°C
Ignition protection type: Ex m (encapsulation)
Temperature class: T4

Marking on valve   II 2 G Ex h IIC T6 Gb
-10°C ≤ Ta ≤ +50°C
  II 2 D Ex h IIIC T80°C
Db -10°C ≤ Ta ≤ +50°C

A low temperature version for -20°C ... +50°C is also available on request. Please note that the system is restricted by the minimum applicable temperature of the coil of -20°C.

The following **solenoid valves** are available:

Delivery contains valve with the appropriate operator system, coil, manual and declaration of conformity.

MA 36 EEx m II T4 CSA FM

CSA / FM approved encapsulated coils for gas and dust explosion-hazardous environment with 60 cm flying leads.

Voltage:	Delivery on request: 12VDC, 24VDC, 110VAC, 220VAC, 240VAC
Voltage tolerance:	- 10...+ 10%
Relative duty cycle:	100 %
Temperature range:	-20°C ... +60°C
Protection according to EN 60529:	IP 65
Material solenoid coil:	Thermoplasticpolyester
Coil rating according to DIN VDE 0580:	Class H
Conduit:	1/2" NPT

MA 36 EEx m II T4 CSA FM

As the coil is 36 mm wide, a spacer plate called "ZPN 8" has to be used, in case of combination with our NAMUR-valve series 700. If used with NAMUR-valve series 121 a spacer plate called "ZPN 6-5" has to be used. You can find both plates on page 2.10.16.

CSA/FM approval is only valid as long as the associated components are used.

Please note:
The coil is not approved according to ATEX.

Hazardous Locations:

Ex m II T4 and Division 1

Specifications in accordance to CSA certificate:
Class I, Division 1, Groups A, B, C and D; Class II, Groups E, F and G; Class III
Class I, Division 2, Groups A, B, C, D.

Specifications in accordance to FM certificate:
Explosion-proof Class I, Division 1, Groups A, B, C, D, T4, Ta = 60 °C
encapsulation/explosion-proof Class I, Zone 1, AEx m II T4, Ta = 60 °C
dust-ignition-proof for Class II/III, Division 1, Groups E, F and G, T4, Ta = 60 °C
Nonincendive Class I, Division 2, Groups A, B, C, D, T4, Ta = 60 °C
Suitable for Class II, III, Division 2, Groups E, F, G, T4, Ta = 60 °C

The current standards can be found in the certificates.

Type	Voltage	Operating press.	Power cons.	Temperature class
MA 36 EEx M II T4 CSA FM 12DC	12 V=	max. 10 bar	4,5 Watt	T4 (135° C)
MA 36 EEx M II T4 CSA FM 24DC	24 V=	max. 10 bar	4,6 Watt	T4 (135° C)
MA 36 EEx M II T4 CSA FM 110AC	110 V~	max. 10 bar	6,8 VA	T4 (135° C)
MA 36 EEx M II T4 CSA FM 220AC	220 V~	max. 10 bar	7,7 VA	T4 (135° C)
MA 36 EEx M II T4 CSA FM 240AC	240 V~	max. 10 bar	7,7 VA	T4 (135° C)

When this solenoid system is used in combination with „ATEX certified“ mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21 and 22.

MA 22 EEx m II T4

ATEX approved encapsulated coils for gas and dust explosion-hazardous environment.

System is also IEC-Ex approved.

The standard cable length is 3 meter, others on request.

Voltage tolerance: -10...+10 %

Relative duty cycle: 100 %

Temperature range: -20°...+50° C

Insulation class of insulating materials according to DIN VDE 0580: F

Protection with mounted plug-in connector according to IEC 529: IP 65

Moulding material: Thermoplasticpolyester

Marking on coil:   II 2G Ex mb IIC T4 Gb
II 2D Ex mb tb IIIC T130°C Db

The ATEX approval is only valid as long as the associated components are used.

Type	Operating press.	Power consumption	Temperature class
MA 22 EEx M II T4 24DC	max. 10 bar	5,0 Watt	T4 (135° C)
MA 22 EEx M II T4 110AC	max. 10 bar	4,5 VA	T4 (135° C)
MA 22 EEx M II T4 230AC	max. 10 bar	5,1 VA	T4 (135° C)

ATEX-approved valves – Ex ia – standard temperature range – aluminum

The following solenoid valves are available:

Material: Aluminum, anodized
Zone: 1, 2, 21, 22
Temperature range: -10°C ... +50°C
Ignition protection type: Ex ia (intrinsically safe)
Temperature class: T6

Marking on valve

CE Ex II 2 G Ex h IIC T6 Gb
-10°C ≤ Ta ≤ +50°C
CE Ex II 2 D Ex h IIC T80°C
Db -10°C ≤ Ta ≤ +50°C

Please note:

Maximum operating pressure for valves with Ex ia solenoid system is 8 bar!

Coil is 30 mm wide!

Solenoids are described on page 2.14.3.3.5.

Delivery contains valve with the appropriate operator system, coil, connector, manual and declaration of conformity.

Delivery contains valve with the appropriate operator
system, coil, manual and declaration of conformity.

MA 30 EEx ia tD II CT6 24DC

ATEX approved intrinsic safety coil and connector for gas and dust explosion-hazardous environment. System is also IEC-Ex approved. Electrical connection according to DIN EN 175301-803-A / ISO 4400.

Coil:

Electrical characteristics: 21,6... 28 V DC
>37 mA
final temperature rise
18 K
275 Ohm +/-8 %

Relative duty cycle: 100 %

Temperature range: -40° ... +50° C

Insulation class of insulating materials according to DIN VDE 0580:

F

Protection level with connector according to EN 60529:

IP 65

Moulding material:

Thermoset resin (Epoxy)

Marking on coil:

CE **Ex** II 2G Ex ia IIB/IIC T6
II 2D Ex tb IIIC T80°C

Barrier:

Electrical characteristics: 21,6... 28 V DC
Admissible peak value: 28 V DC
115 mA
1,6 W

When this solenoid system is used in combination with „ATEX certified“ mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21, and 22.

MA 30 EEx ia tD II CT6 24DC

ST 30 Ex ia

Order Code: MA 30 EEx ia tD II CT6 24DC

As the coil is 30 mm wide, a spacer plate called „ZPN 5“ has to be used, in case of combination with our NAMUR-valve series 700 refer to page 2.10.12.

ST 30 Ex ia is an ATEX approved connector, especially designed for being used in combination with the intrinsic safety coil. For dust approval (zone 21), this original connector is mandatory. Delivery includes connector ST 30 Ex ia, flat nitril gasket and fixing screw (zinc-plated steel). Form according to A - ISO 4400, no LED, no varistor, operating voltage 0 – 250 V, max. current 10 A, cable diameter 6 – 8 mm.

How to select a suitable barrier:

I/U Characteristics supply units/solenoid coil

The ATEX approval is only valid as long as the associated components are used.

ATEX-approved valves – Ex nA and tc – standard temperature range – aluminum

2.14.3.4.1
page 298

Material: Aluminum, anodized, head PA
Zone: 2, 22
Temperature range: -10°C ... +50°C
Ignition protection gas: Ex nA (non-sparking)
Ignition protection dust: Ex t (protection using enclosure)**
Temperature class: T5

Marking on valve

Details of junction box

ATEX approved encapsulated coil with junction box for gas and dust explosion-hazardous environment.

Voltage tolerance: - 10...+ 10%
Relative duty cycle: 100 %
Temperature range: -40°C...+50°C

Insulation class of insulating Materials according to DIN VDE 0580:

F

Protection according to EN 60529: IP 65
(IP 67 with nut type M G1/8 M5 in combination with exhaust protection fitting type ESR M5)

Moulding material: Thermoplasticpolyester

Cable Gland: M20 x 1,5
for cable diameters 6 – 13 mm

Please note:
Same coil for DC and AC.

Marking on coil:  II 2G Ex e mb IIC T6 Gb
II 2D Ex tb mb IIIC T80°C Db

The ATEX approval is only valid as long as the associated components are used.

Important installation instructions:
Connecting cables and connecting lines shall be suitable for permanent application in a temperature range of -40 °C up to +105 °C and must be laid fixed to the device. The user shall provide for a strain relief. When using silicone or silicone-containing cables for connection or cables that are not resistant to scoring, these shall be protected against mechanical damage. For further instructions, please ask us for the operating manual.

When this solenoid system is used in combination with "ATEX certified" mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21 and 22.

MA 36 EEx dm IIC T5_ _

ATEX approved encapsulated coil with flameproof junction box for gas and dust explosion-hazardous environment.

Voltages: 12VDC, 24VDC, 24VAC, 110VAC, 230VAC

Voltage tolerance: - 10...+ 10%

Relative duty cycle: 100 %

Temperature range: -20°C...+50°C

Ignition protection type: Coil encapsulated, junction box flameproof

Protection with connector according to EN 60529: IP 66

Moulding material: Thermoplasticpolyester

Coil rating according to DIN VDE 0580: Class F

Cable Gland: PG 9 DIN 40-430 for cable diameters 6 – 8 mm

Marking on coil:  II 2G Ex db mb IIC T5 Gb
II 2D Ex tb IIIC T95°C IP66 Db

As the coil is 36 mm wide, a spacer plate called "ZPN 8" has to be used, in case of combination with our NAMUR-valve series 700. If used with NAMUR-valve series 121 a spacer plate called "ZPN 6-5" has to be used. You can find both plates on page 2. 10. 12.

The ATEX approval is only valid as long as the associated components are used.

CBN 700 K Ex/ CBN 700 K EB Ex

Controlblock for butterfly valves with inflatable valve-seat

CBN 700 K Ex

CBN 700 K EB Ex

Control block for double acting actuators with interface according to 1/4" NAMUR-standard, to be used on process-valves with inflatable valve seat.

The control-block receives it's signals to open and close from a standard 5/2-way NAMUR-valve. The block is to be put between the actuator and the NAMUR-valve (flange-version). The closing-signal is fed through to the actuator, the seal is inflated with time-delay.

When the process-valves is to be closed first the seal is deflated, with time-delay the actuator opens the process-valve.

Opening- and closing-time-delay can be adjusted independently but they are related to the operating pressure.

At 6 bar time-delay can be adjusted between 0 and 2 seconds.

Type **CBN 700 K EB Ex** with additional port X: pressurizing of the inflatable seal does not start before a pneumatic signal is received.

If the valve is required with G 1/4" ports, plate GPN 1/4 can be added. For details please refer to page 2.10.12.

Delivery includes 2 screws, 2 O-rings, 2 protection caps.

Please note:

If a pressure regulator is used between the CBN 700 (port P) and the inflatable seal, an additional quick exhaust valve is needed to exhaust te seal.

P 311 501 SR Ex

P 411 701 SR Ex

P 311 501 SR pneumatically actuated 3/2-way valve with mechanical spring return.

Valve can be used normally closed (pressure at port 1) and normally open (pressure at port 3).

Can also be used as 2/2-way valve.

Unused port to be closed by silencer or plug.

P 411 701 SR pneumatically actuated 4/2-way valve with mechanical spring return.

Valve either blocks all ports or is open from 1 to 4 and from 3 to 2.

Port 5 is a vent port and should have a silencer installed.

Valve can be used as an **adjustable pneumatic pressure switch**. By turning the hand-wheel the required minimum actuation pressure can be set between 3 and 6 bar. Adjustment is not independent from operation pressure.

Please take care about the hysteresis of the spring.

Marking von valve:

CE II 3 G Ex h IIC T6 Gb
-10°C ≤ Ta ≤ +50°C

CE II 3 D Ex h IIC T80°C
Db -10°C ≤ Ta ≤ +50°C

Zone: 2 and 22

Type	Port size	Air flow	Operating press.	Regulating range act. press.	Max. act. press.	Weight
P 311 501 SR Ex	G 1/8"	650 l/min	2 - 10 bar	3 - 6 bar	10 bar	0,16 kg

SENR 207 01 Ex

Quick-exhaust-block with non-return valve

The valve is designed for fast closing of spring-return actuators with 1/4" NAMUR-interface.

Any 3/2-way valve can be used as pilot valve. The connection towards the pilot valve is G 1/4" ported and for NAMUR-valves with the 1/4" NAMUR-interface.

The block assures that only compressed air that has been used to open the actuator is used in the spring-chamber (non-return-function). Excess air is released very fast by the quick-exhaust valve, exhaust-port G 1/2", orifice 10 mm. The non-return valve makes absolutely sure that no ambient atmosphere can be sucked into the actuator.

Two exhaust-ports R allow that the product can always be assembled so the silencer faces downwards.

Delivery includes 2 screws, 2 O-rings, 1/2" plug for port R.

Marking von valve:

CE II 3 G Ex h IIC T6 Gb
-10°C ≤ Ta ≤ +50°C
CE II 3 D Ex h IIC T80°C
Db -10°C ≤ Ta ≤ +50°C

ST 22 Ex

ST 30 Ex ia / ST 30 Ex nA

Connectors as accessories for explosion-proof coils.

Type ST 22 Ex

Connector to be used in combination with MA 22 Ex nA. Connector is classified for zone 2 and 22 cat. IIG/D. Includes flat seal.

Type ST 30 Ex ia

Connector which is to be used in combination with the coil type MA 30 Ex ia tD II CT6 24DC. Connector has no separate ATEX certification. Connector is classified for zone 21, cat. IID. Can also be used in combination with intrinsically safe coils in zone 1 (cat. IIG). Includes flat silicon seal.

Type ST 30 Ex nA

Connector to be used in combination with MA 30 Ex na. Connector is classified for zone 2 and 22, cat. IIIG and IIID. Includes profiled NBR seal.

Other connectors are available on request.
