

Mass Flow Meter (MFM)

- Nominal flow ranges from 20 l_N/min up to 2500 I_N/min
- High accuracy
- Fast response time
- Protection class IP65
- Optional: Fieldbus interface

Type 8006 can be combined with...

Type 8619

Multichannel program controller

Type 0330

3/2 or 2/2 way solenoid valve

Typ 6027

2/2 way plunger valve

Typ 8611 eCONTROL

Type 8006 can optionally be calibrated for two different gases; the user can switch between these two gases. As electrical interfaces both, analog standard signals and fieldbuses are available.

The MFM type 8006 is especially designed for use in harsh environments due to a low sensitivity to contamination and the high protection class.

The mass flow meter (MFM) type 8006 is suited for measuring the mass flow of high gas flows. The thermal inline sensor is located directly in the gas stream and therefore reaches very fast response

Technical Data		
Nominal flow range ¹⁾	202500 I _N /min ²⁾ , N ₂ equivalent	
(Q _{nom})	see table on page 2, higher flows on request	
Turn-down ratio	1:50 ³⁾	
Operating gas	Neutral, non-contaminated	
	gases, others available on request	
Calibration gas	Operating gas or air with correcting function	
Max. operating pressure		
(Inlet pressure)	10 bar, up to 25 bar (N ₂ , air, argon)	
Gas temperature	-10+70°C (-10+60°C with oxygen)	
Ambient temperature	-10+45 °C (higher temperatures on re-	
	quest)	
Accuracy	±1.5% o.R. ±0.3% F.S.	
(after 15 min warm up time)	(o.R.: of reading; F.S.: of full scale)	
Repeatability	± 0.1 % F.S.	
Response time (t _{95%})	< 500 ms	
Materials		
Body	Aluminium (black anodized) or stainless steel	
Housing	Aluminium (coated)	
Seals	FKM, EPDM	

¹⁾ The nominal flow value is the max. flow value calibrated which can be measured. The nominal flow range defines the range of nominal flow rates (full scale values) possible.

Port connection	G ¼, %, ½, ¾, 1 NPT ¼, %, ½, ¾, 1 With compression fittings (see p. 7)
Electr. connection	Socket M16, round, 8 pin and socket D-Sub HD15, 15 pin
Additionally with:	Socket D-Sub HD15, 15 piii
-PROFIBUS-DP:	Socket M12 5 pin or D-Sub 9 pin
-CANopen:	Plug M12 5 pin or D-Sub 9 pin
with RS485 version only:	Plug D-Sub 9 pin
Operating voltage	24 V DC
Voltage tolerance	±10%
Residual ripple	< 2%
Power consumption	3.510 W, with fieldbus: 412.5 W (acc. to the version)
Type of protection	IP50 (RS485, RS422 versions)
(with connected cables)	IP65
Dimensions	See drawings on p. 6
Total weight	1.2 kg (Al)
(Example standard block)	3.0 kg (VA)
Mounting position	Horizontal or vertical
Light emitting diodes	Indication for
(Default, other functions programmable)	1. Power 3. Limit
	2. Communication 4. Error

 $^{^{2)}\}mbox{Index N: Flow rates referred to 1.013 bar and 0 °C.}$

Alternatively there is an Index S available which refers to 1.013 bar and 20 $^{\circ}$ C $^{\circ}$ J With vertical installation and flow downwards the turn-down ratio is 1:10

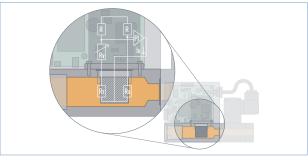

Technical Data (cont.)			
Device variant	Analog signal version	Fieldbus version	RS485 version (only D-Sub, 9 pin)
Analog communication Output signal (actual flow) Max. current voltage output Max. load current output	$0\dots5$ V, $0\dots10$ V, $0\dots20$ mA or $4\dots20$ mA 10 mA 600 Ω	None	None
Fieldbus option (D-Sub HD15 covered with sealed plate for, pins for analogue inputs/outputs not connected)	None	PROFIBUS-DP, CANopen	Modbus RTU (via RS interface)
Digital communication via adapter possible:	RS232 (supports Modbus RTU) RS485, RS422 or USB		RS485, RS422 USB
Binary inputs (Default, other functions programmable)	Three: 1. not assigned 2. not assigned 3. not assigned		One: not assigned
Binary outputs (Default, other functions programmable)	Two relay outputs 1. Limit (O _{nom} almost reached) 2. Error (e.g. sensor fault) Load capacity: max. 60 V, 1 A, 60 VA		One relay output 1. Limit (Q _{nom} almost reached) Load capacity: max. 25 V, 1 A, 25 VA

Pressure Loss Diagram (ref. to air, with 250µm inlet filter)

The diagram shows exemplarily the pressure loss characteristics when air flowing through. For determining the pressure loss with another gas it needs to calculate the air equivalent and respect the fluidics needed with the other gas.

Measuring Principle

This sensor works as a hot-film anemometer in the so-called CTA operational mode (Constant Temperature Anemometer). To do this, two resistors with precisely specified temperature coefficients located directly in the media flow and three resistors located outside the flow are connected together to form a bridge.

The first resistor in the gas flow (R_{γ}) measures the fluid temperature, while the second, low-value resistor (R_{s}) is heated so that it is maintained at a fixed, predefined over-temperature with respect to the fluid temperature.

Nominal Flow Ranges of Typical Gases

(Other gases on request)

Gas	Min. Q _{ກຸດຫ} [I _N /min]	Max. Q _{nom} [I _N /min]
Acetylene	20	975
Ammonia	20	1250
Argon	20	1500
Carbon dioxide	20	800
Air	20	2500
Methane	20	750
Propane	20	400
Oxygen	20	2500
Nitrogen	20	2500

The heating current required to maintain this is a measure of the heat being removed by the flowing gas, and represents the primary measurement.

An adequate flow conditioning within the MFM and the calibration with high-quality flow standards ensure that the mass of gas flowing per time unit can be derived from the primary signal with high accuracy.

Notes Regarding the Configuration

The decisive factors for the perfect functioning of an MFM within the application are the fluid compatibility, the max. inlet pressure and the correct choice of the flow meter range. The pressure drop over the MFM depends on the flow rate and the operating pressure.

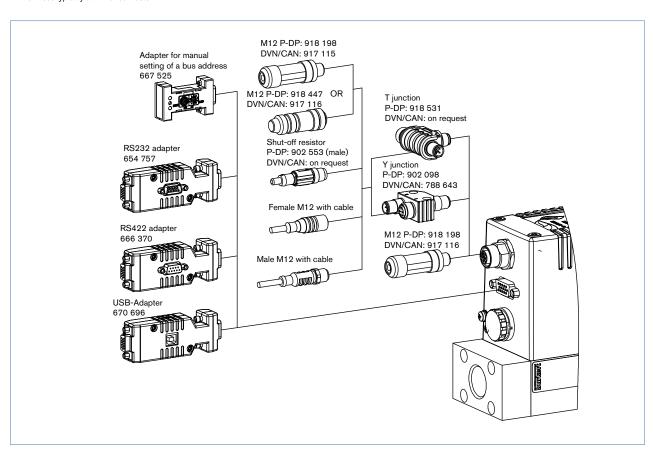

► The questionnaire on page 7 contains the relevant fluid specification. Please use in this way the experience of Burkert engineers already in the design phase and provide us with a copy of the questionnaire containing the data of your application together with your inquiry or order.

- 4) The adapters serve mainly for initial operation or diagnosis. Those are not obligatory for continuous operation.
- 5) The two M12 connectors as listed above cannot be used together on the same side of the Y-junction. At least one of the two M12 connection needs to be an overmoulded cable which uses typically a thinner connector.
