

Mass Flow Meter for Gases (MFM)

- Nominal flow ranges from 0.010 I_N/min to 80 I_N/min
- High accuracy
- Very fast response times
- Protection class IP65
- Optional: Fieldbus interface

Type 8702 can be combined with...

Type 8619

Multichannel program controller

Type 0330

3/2 or 2/2 way solenoid valve

Typ 6027

2/2 way plunger valve

Typ 8611

eCONTROL

The mass flow meter (MFM) type 8702 is suited for measuring the mass flow of gases over a big flow range. The thermal MEMS sensor is located directly in the gas stream and therefore reaches very fast response times.

Type 8702 can optionally be calibrated for two different gases; the user can switch between these two gases. As electrical interfaces both, analog standard signals and fieldbuses are available.

Type 8712 is especially designed for use in harsh environments due to the high protection class.

Technische Daten	
Nominal flow range¹⁾ (Q_{nom})	0.01...80 I _N /min ²⁾ (ref. to N ₂)
Turn-down ratio	1:50, wider span on request
Operating gas	Neutral, non-contaminated gases, others available on request
Calibration gas	Operating gas or air with correcting function
Max. operating pressure (Inlet pressure)	Up to max. 10 bar (145 psi), depending on the orifice of the valve
Gas temperature	-10... +70 °C (-10... +60 °C with oxygen)
Ambient temperature	-10... +50 °C
Accuracy (after 1 min warm up time)	± 0.8% o.R. ± 0.3% F.S. (o.R.; F.S.: of full scale)
Repeatability	± 0.1% F.S.
Settling time (t_{95%})	< 300 ms
Materials	Body: Stainless steel Housing: PC (Polycarbonate) Seals: FKM, EPDM (others on request)
Port connection	G 1/4", NPT 1/4" or compression fitting
Electr. connection	Socket M16, round, 8 pin and socket D-Sub HD15, 15 pin With PROFIBUS-DP: Socket M12 5 pin (for IP65) or D-Sub 9 pin With CANopen: Plug M12 5 pin (for IP65) or D-Sub 9 pin
Operating voltage	24 V DC
Voltage tolerance	± 10%
Residual ripple	< 2%
Power consumption	max. 2.5 W (analog communicator) to 5 W (digital communicator)
Output signal (signal output)	0... 5 V, 0... 10 V, 0... 20 mA or 4... 20 mA Max. current, volt. output Max. load, current output 600 Ω
Digital communication via adapter possible:	RS232, Modbus RTU (via RS interface) RS485, RS422 or USB (see accessories table on p. 3)
Fieldbus option	PROFIBUS-DP, CANopen (D-Sub HD15 covered with sealed plate with fieldbus MFC)
Type of protection (with connected cables)	IP65
Dimensions [mm] (without fitting)	See drawings on p. 7-8
Total weight	1000 g
Mounting position	Horizontal or vertical
Light emitting diodes (Default, other functions programmable)	Indication for Power, Communication, Limit, Error
Binary inputs (Default, other functions programmable)	Three various functions programmable
Binary outputs (Default, other functions programmable)	Two relay outputs 1. Limit (Q _{nom} almost reached) 2. Error (i.e. sensor fault) Load capacity: max. 60 V, 1 A, 60 VA

¹⁾ The nominal flow value is the max. flow value calibrated which can be controlled. The nominal flow range defines the range of nominal flow rates (full scale values) possible.

²⁾ Index N: Flow rates referred to 1.013 bar and 0 °C.

Alternatively there is an Index S available which refers to 1.013 bar and 20 °C.

Measuring Principle

The actual flow rate is detected directly by a sensor placed in a bypass channel. This operates according to a thermal principle which has the advantage of providing the mass flow which is independent of pressure and temperature.

A small part of the total gas stream is diverted into a small, specifically designed bypassing channel which ensures laminar flow conditions. The sensor element is a chip immersed into the wall of this flow channel. The chip, produced in MEMS technology, contains a heating resistor and two temperature sensors (thermopiles) which are arranged symmetrically upstream and downstream of the heater. The differential voltage of the thermopiles is a measure of the mass flow rate passing the flow sensor. The calibration procedure effectuates a unique assignment of the sensor signal to the total flow rate through the device.

Pressure Loss Diagram (ref. to air, with 250µm inlet filter)

The diagram shows exemplarily the pressure loss characteristics when air flowing through. For determining the pressure loss with another gas it needs to calculate the air equivalent and respect the fluidics needed with the other gas.

Nominal Flow Range of Typical Gases

(other gases on request)

Gas	Min. Q _{nom} [l _N /min]	Max. Q _{nom} [l _N /min]
Argon	0.01	80
Helium	0.01	500
Carbon dioxide	0.02	40
Air	0.01	80
Methane	0.01	80
Oxygen	0.01	80
Nitrogen	0.01	80
Hydrogen	0.01	500

Notes regarding the selection of the unit

The decisive factors for the perfect functioning of an MFM within the application are the fluid compatibility, the normal inlet pressure and the correct choice of the flow meter range. The pressure drop over the MFM depends on the flow rate and the operating pressure.

³⁾ The adapters serve mainly for initial operation or diagnosis. Those are not obligatory for continuous operation.

⁴⁾ The two M12 connectors as listed above cannot be used together on the same side of the Y-junction. At least one of the two M12 connection needs to be a prefabricated cable which uses typically a thinner connector.
