

Type 8750 can be combined with...

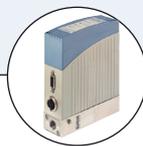

**System ELEMENT**

Valve system

**Type 8644**

Valve island

**MFC 8712**

Mass Flow Controller

**Type 8400**

Temperature sensor

## Flow Rate Controller, flow control system for gases

- Reliable and robust system
- Reduced interfaces
- Orifice plate and actuator in one
- Easy operation
- Fit for stand-alone operation

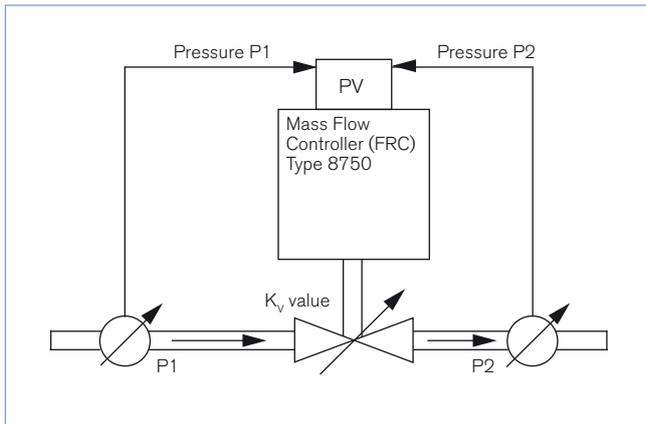

The flow rate controller, Type 8750, is a system to measure and control gases using the differential pressure principle. The reliable and robust system consists of an ELEMENT continuous control valve, Type 2301, with the compact process controller Type 8693 and two pressure transmitters, Type 8323. These components are supplied within an assembled system including a special body.

The Bürkert flow rate controller does not need a separate flow meter. The control valve serves as orifice plate. From the pressure difference across the valve and the given density and temperature a nominal flow can be calculated. Therefore the flow characteristics of the valve are given to the process controller. The volume flow can then be adjusted by changing the stroke of the control valve. So all components of the control loop build an integrated system.

The flow rate controller offers a high repeatability and large measuring range. With the combination of orifice plate and control valve the pressure drop is reduced in comparison to conventional solutions. With the variable orifice of the control valve the measurement range is increased. Low assembly costs and easy commissioning are further advantages of this unique system.

Technical Data	
<b>Complete system</b>	
<b>Port size</b>	DN15 to 100
<b>Media</b>	Air, Nitrogen, Carbondioxide, other gases
<b>Media temperature</b>	0 to 80 °C
<b>Ambient temperature</b>	0 to 55 °C
<b>Control media</b>	Instrument air acc. to DIN ISO 8573-1
<b>Supply pressure</b>	5.6 - 7 bar
<b>Pilot air ports</b>	Threaded ports G 1/8 stainless steel
<b>Process connection</b>	Flange connection acc. to DIN EN 1092-1 other connections on request
<b>Process controller</b>	
<b>Power supply</b>	24 V DC ± 10 %
<b>Ripple</b>	10%; no technical direct current
<b>Electrical connection</b>	Power supply: circular connector M12 × 1, 4-pins In/output signal: circular connector M12 × 1, 8-pins / Bus Internal: circular connector M8 × 1, 4-pins
<b>Protection class</b>	IP65 / IP67 acc. to EN 60529
<b>Bus communication</b>	Profibus DPV1, DeviceNet
<b>Pressure transmitter</b>	
<b>Measurement range</b>	0 - 100 mbar to 0 - 16 bar (standard: 0 - 10 bar)
<b>Measurement principle</b>	Piezoresistive
<b>Measurement error</b>	≤ 0.5% of full scale
<b>Materials</b>	
<b>Body</b>	Stainless Steel
<b>Actuator housing</b>	PPS, Stainless Steel
<b>Process controller</b>	PPS, Stainless Steel
<b>Pressure transmitter housing</b>	Stainless Steel
<b>Seal Seat</b>	PTFE, Stainless Steel on request
<b>Packing</b>	PTFE-V-Seals
<b>Sensor body</b>	Stainless steel

FRC Schematic

Determination of  $k_v$  values

Pressure drop	$k_v$ value for gas [m <sup>3</sup> /h]
Subcritical $p_2 > \frac{p_1}{2}$	$= \frac{Q_N}{514} \sqrt{\frac{T_1 \rho_N}{p_2 \Delta p}}$
Supercritical $p_2 < \frac{p_1}{2}$	$= \frac{Q_N}{257 \rho_1} \sqrt{T_1 \rho_N}$

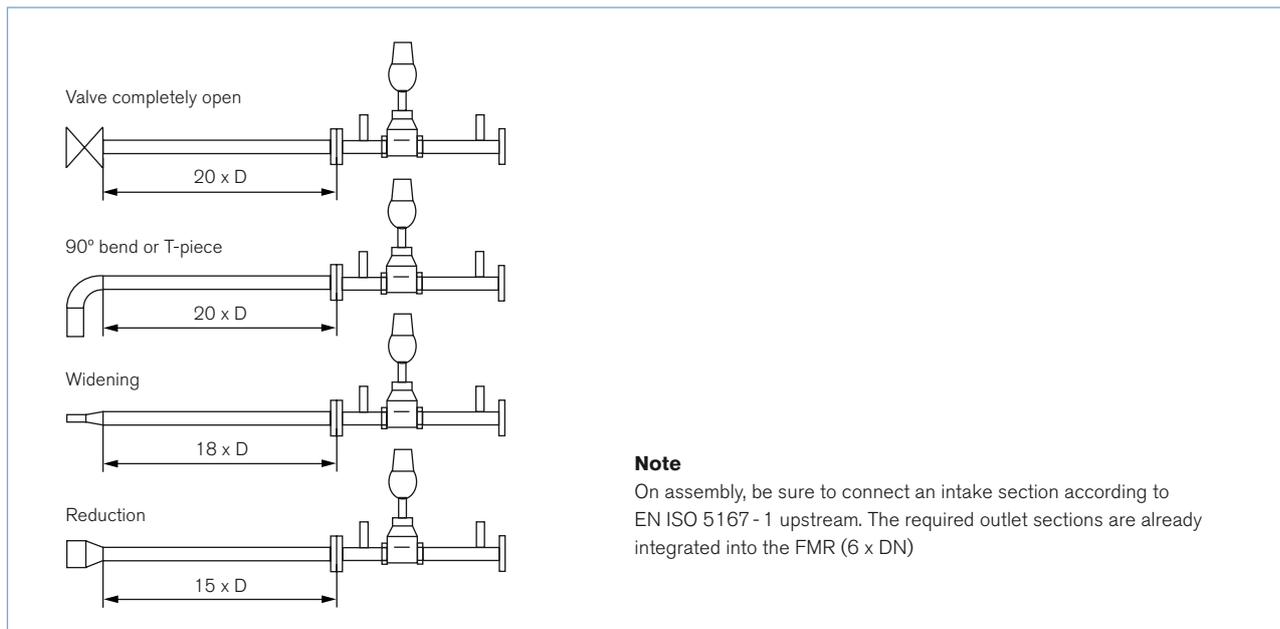

- $k_v$  Flow coefficient [m<sup>3</sup>/h]<sup>6)</sup>
- $Q_N$  Standard flow rate [m<sup>3</sup>/h]<sup>7)</sup>
- $p_1$  Inlet pressure [bar]<sup>8)</sup>
- $p_2$  Outlet pressure [bar]<sup>8)</sup>
- $\Delta p$  Differential pressure  $p_1 - p_2$  [bar]
- $\rho$  Density [kg/m<sup>3</sup>]
- $\rho_N$  Standard density [kg/m<sup>3</sup>]
- $T_1$  Temperature of medium [(273+t)K]

<sup>6)</sup> measured for water at 20 °C,  $\Delta p = 1$  bar, via the device

<sup>7)</sup> Standard conditions at 1.013 bar and 0 °C (273K)

<sup>8)</sup> Absolute pressure

Intake section according to EN ISO 5167 - 1

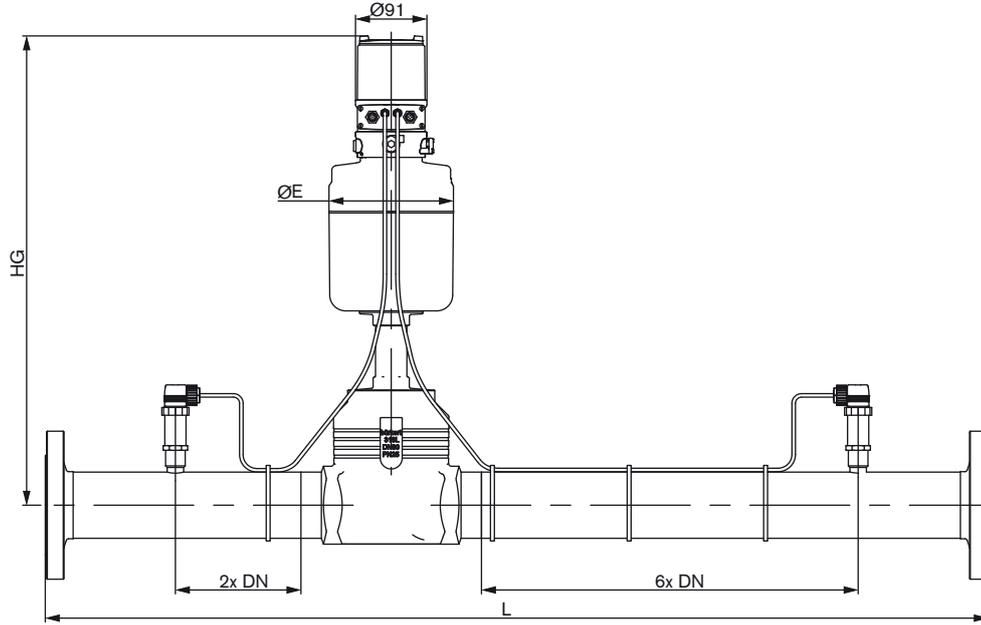

**Note**

On assembly, be sure to connect an intake section according to EN ISO 5167 - 1 upstream. The required outlet sections are already integrated into the FMR (6 x DN)

For highest precision consider the intake sections according to EN ISO 5167 - 1, the outlet section is integrated in the body .

## Dimensions [mm]

DN (Port connection) [mm]	Actuator size	L[mm]	HG[mm]	Ø E[mm]
15	Ø70	330	383	91
25	Ø70	500	392	91
40	Ø90	700	478	120
50	Ø130	800	536	159
65	Ø130	1000	590	159
80	Ø130	1200	598	159
100	Ø130	1400	608	159

## Ordering chart for valves

Flange acc. to DIN EN 1092 - 1, PTFE seal

Port size [mm]	Seat DN [mm]	Actuator size	K <sub>vs</sub> value	Pressure range	Air flow rate at p1=6 and p2=3 bar(g)		Article no.
					Q <sub>max</sub> [Nm <sup>3</sup> /h]	Q <sub>min</sub> [Nm <sup>3</sup> /h]	
DN15	15	M (70 mm)	4.3	0-10 bar	350	20	280436 
DN25	25	M (70 mm)	12.0	0-10 bar	900	40	280437 
DN40	40	N (90 mm)	17.5	0-10 bar	1300	70	280438 
DN50	50	P (130 mm)	37.0	0-10 bar	2900	120	280439 
DN65	65	P (130 mm)	65.0	0-10 bar	5500	200	280440 
DN80	80	P (130 mm)	100	0-10 bar	8500	350	280441 
DN100	100	P (130 mm)	140	0-6 bar	12000	500	280442 

<sup>1)</sup> K<sub>vs</sub> represents the maximum flow capacity of a control valve series. The K<sub>v</sub> value [m<sup>3</sup>/h] is measured to DIN EN 60534 - 2-3 with water (5 - 40 °C) and a pressure drop of 1 bar over the valve.

<sup>2)</sup> The air flow rates mentioned above are given as a reference. The values refer to air with a temperature of 20 °C. The condition for the min. and max. limits is determined at 10 and 90% positions and turbulent air flow.

### Note

Please ask for advice when sizing the flow rate controller FRC. Contact your local sales centre

### Further versions on request

- Port connection
- Seat reductions
- Reduced pressure range
- Sealing Steel/Steel
- Communication via Fieldbus
