

## System Control Unit (SCU)

- Fieldbus coupler for Industrial Ethernet and Fieldbus standards
- Up to 128 input and 128 output variables can be assigned
- Easy integration in the process control system ensured through system specific device description files
- Optional: Expandable with I/O modules
- Optional: Graphical programming for automation of sub-systems

powered by  
**EDIP**

The System Control Unit (SCU) of Type ME2X is the central control unit for Burkert devices (valves, sensors, mass flow controller or displays), which are based on EDIP ("Efficient Device Integration Platform"). The basic version of Type ME2X consists of power-in and power-out modules of Type ME29 and a fieldbus coupler of Type ME23. This fieldbus coupler transmits the internal CANopen based communication of the Burkert field devices to industrial standards for Industrial Ethernet and fieldbus.

Additionally I/O modules from Type ME24 for analog and digital signals can be used to expand the system. Through these standard signals other field devices without a fieldbus interface can be integrated. (For e.g. analog sensors, valves etc.)

With the help of the graphical programming sub-systems can be automated specifically to the customer's needs. (For e.g. controlled mixing of gases, error monitoring through switching commands, timer switches etc.)

Technical data	
<b>Materials of housing</b>	PC (Polycarbonate)
<b>Gateway functionality</b> (Integrated switch for Industrial Ethernet)	PROFINET Ethernet/IP Modbus/TCP Profibus-DP
<b>Input-/ Output signal</b>	via module ME24 2AI / 2DI 2AO / 2DO 4DO
<b>Configuration storage</b>	Micro SD Card (for storing device parameters and configuration, datalogging and easy replacement of a module)
<b>Operating voltage</b>	18 to 35 V DC
<b>Light diodes</b> Power consumption Housing (external)	2 W RGB-LED based on NAMUR NE107
<b>Ambient temperature</b>	0 to 50 °C
<b>Protection class</b> ME21 (Display), ME23 (Gateway) ME24 (I/O Modul), ME29 (entry-exit module), BEF1 (Backplane)	IP20 IP65
<b>Installation</b>	Horizontal or vertical on top hat rail EN 50022

## ME24 I/O Modules (optional) Electrical properties of inputs and outputs

**Supply voltage:** 20 ... 30 V over the Backplane BEF1

**UL devices:** Power supply unit limited to Class 2

**Power consumption:** < 3 W

If the outputs are supplied via büS, the total current is internally limited to 2 A: max. 48 W

Feature	2AO / 2DO / f(x) Modul Analog output; AO		4DO / f(x) Modul Digital output (PWM); DO	2AI / 2DI Modul Analog input; AI	
Electrical signal	Current output	Transistor output	Transistor output: Open-Drain-output	Current input or voltage input	Voltage input

Clock frequency	-	-	20 kHz	-	-

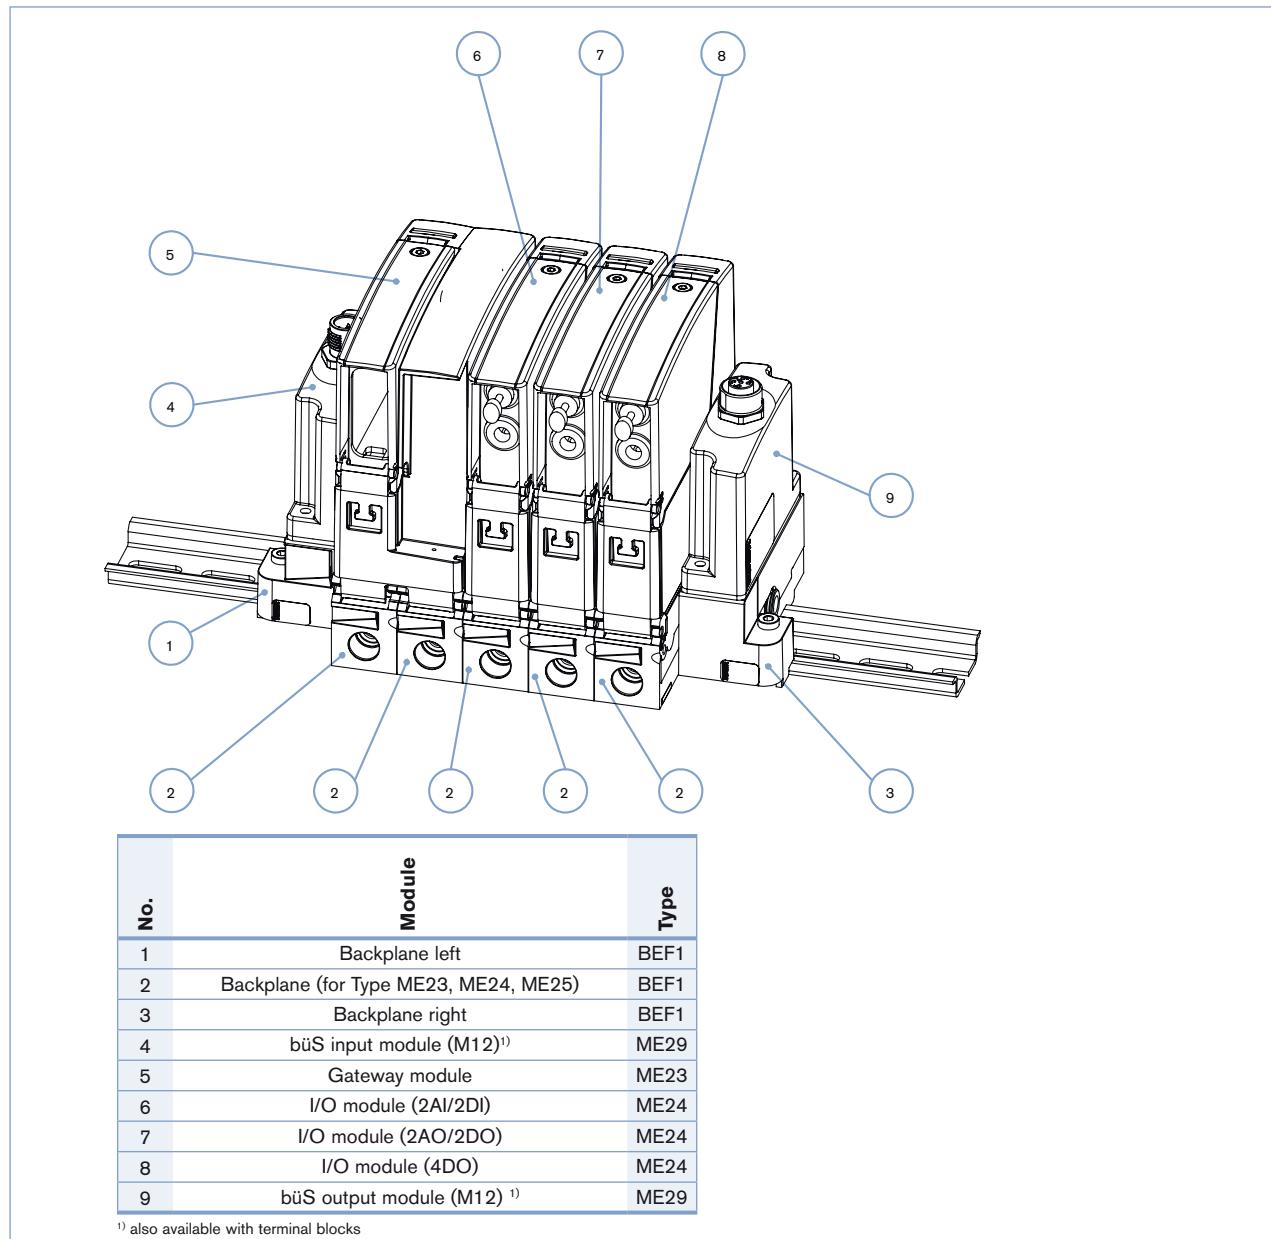

## EDIP – Efficient Device Integration Platform

EDIP is the new Burkert device platform which will in the future standardise the operation, communication and interfaces of many process devices (e.g. Sensors, Mass Flow Controller). Thanks to EDIP the devices can be intelligently networked and operated with the consistent Software, the Burkert Communicator. The backbone and connecting link of EDIP is the digital interface which complies with the CANopen standard and is always downwards compatible to it. EDIP offers following advantages to the user:

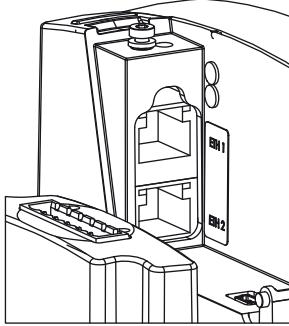

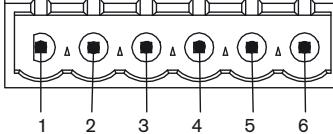

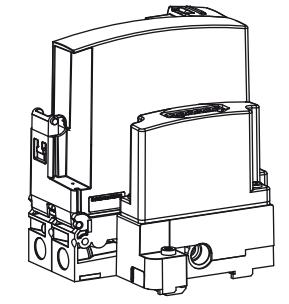

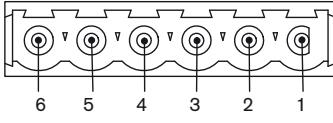

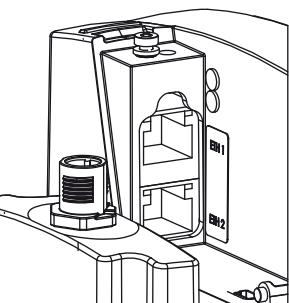

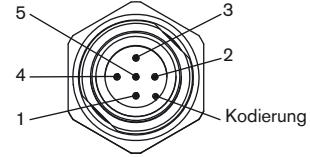

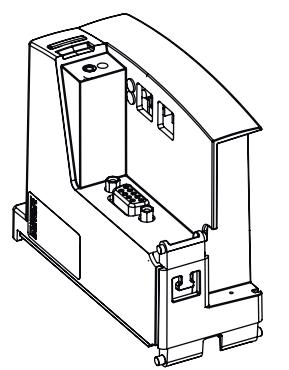

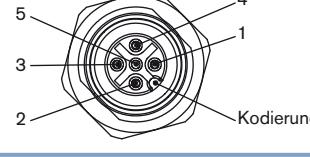

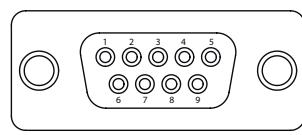

- Interoperability - guaranteed by the uniform interface
- Comfortable operating and display concept
- Fast start-up and easy commissioning
- Modularity – allows adjustment of the devices to individual customer requirements
- Easy transfer and backup of device settings

## System Connect with Type ME2X

Example of a possible SCU-configuration. Further modules can be added to expand the system.

## Pin assignment

	<b>Terminal block 6 pin male (Power input)</b>	<b>Pin</b>	<b>Assignment</b>
		1	DGND
		2	CAN_L
		3	SHIELD
		4	CAN_H
		5	V+ (only input)
		6	FE (opt.)
	<b>Terminal block 6 pin female (Power output)</b>	<b>Pin</b>	<b>Assignment</b>
		1	DGND
		2	CAN_L
		3	SHIELD
		4	CAN_H
		5	V+ (only output)
		6	FE (opt.)
	<b>M12, 5 pin, male (Power input)</b>	<b>Pin</b>	<b>Assignment</b>
		1	SHIELD
		2	V+ (only input)
		3	DGND
		4	CAN_H
		5	CAN_L
	<b>M12, 5 pin, female (Power output)</b>	<b>Pin</b>	<b>Assignment</b>
		1	SHIELD
		2	V+ (only output)
		3	DGND
		4	CAN_H
		5	CAN_L
	<b>D-SUB 9 pin, female</b>	<b>Pin</b>	<b>Assignment</b>
		1	SHIELD
		2	N.C.
		3	RxD/TxD - P (B-Line)
		4	CNTR-P
		5	GND
		6	+ 5 V (only for termination resistor)
		7	N.C.
		8	RxD/TxD - N (A-Line)
		9	N.C.

**Hinweis:**

1) Both, the büS input and output modules (ME29) include an integrated 120 Ohm resistor for bus termination. On demand, the resistors can be switched on or off via a DIP switch.

2) CANopen requires two termination resistors: one at the beginning and one at the end of the network. An indicator of the correct bus termination is the resistance between CAN\_H and CAN\_L when the power supply is disconnected; this should be about 60 Ohm.

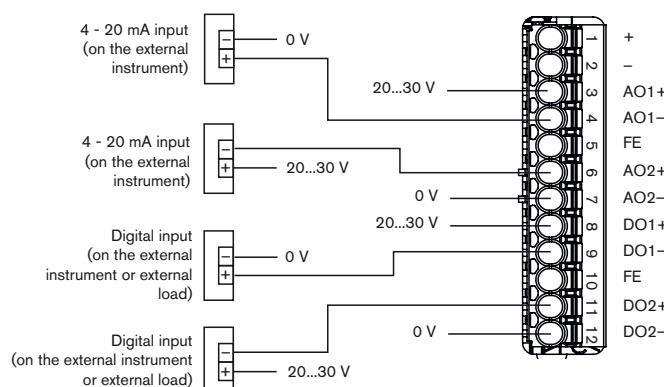

## Pin assignment and wiring

**2AO/DO/f(x)**

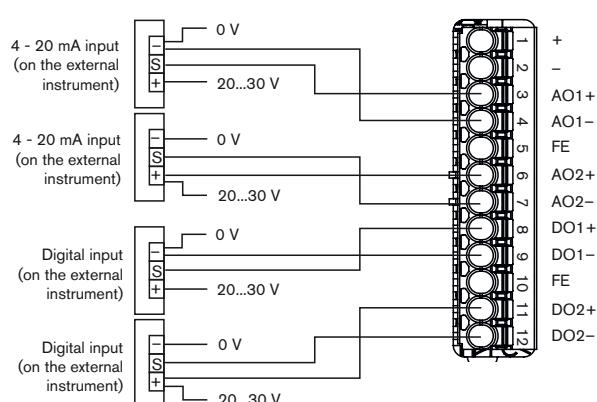

Pin	Pin assignment	External circuit
1	+	20 - 30 V / 2 A max. OUTPUT no galvanic isolation
2	-	20 - 30 V / 2 A max. OUTPUT no galvanic isolation
3	AO1+	+ (4 - 20 mA) output galvanically isolated
4	AO1-	- (4 - 20 mA) output galvanically isolated
5	FE	Shielding
6	AO2+	+ (4 - 20 mA) output galvanically isolated
7	AO2-	- (4 - 20 mA) output galvanically isolated
8	DO1+	+ NPN galvanically isolated
9	DO1-	- NPN galvanically isolated
10	FE	Shielding
11	DO2+	+ NPN galvanically isolated
12	DO2-	- NPN galvanically isolated

**2AO, 2DO, f(x):2-wire**

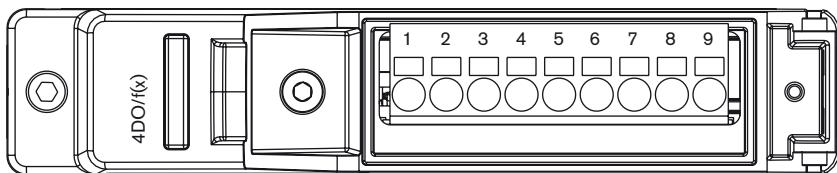

External circuit 2AO, 2DO, f(x), 2-wire

**2AO, 2DO, f(x):3-wire**

External circuit 2AO, 2DO, f(x), 3-wire

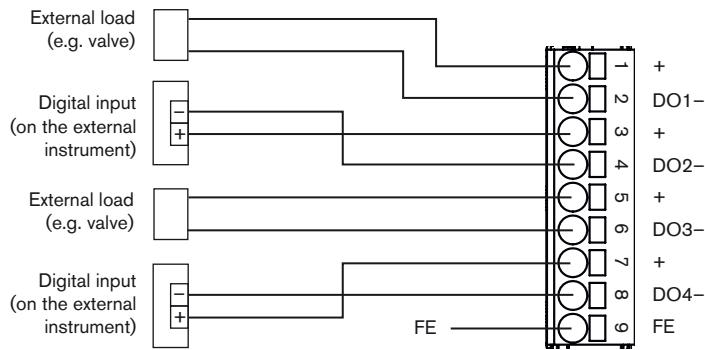

## Pin Assignment and wiring, continued

4DO/f(x)

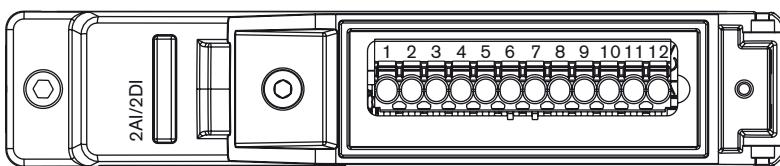

Pin	Pin assignment	External circuit
1	+	20-30 V / 2 A max. total current no galvanic isolation
2	DO1-	Open Drain
3	+	20-30 V / 2 A max. total current no galvanic isolation
4	DO2-	Open Drain
5	+	20-30 V / 2 A max. total current no galvanic isolation
6	DO3-	Open Drain
7	+	20-30 V / 2 A max. total current no galvanic isolation
8	DO4-	Open Drain
9	FE	Shielding

4DO, f(x)

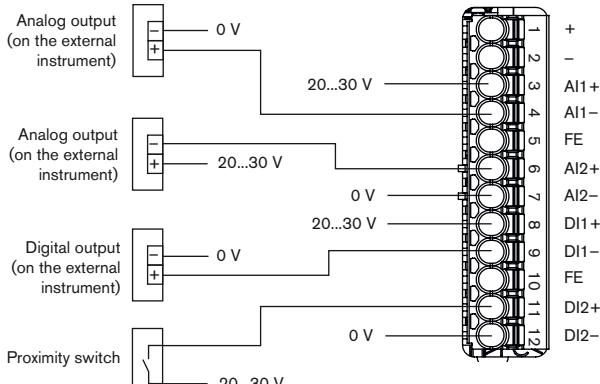

External circuit 4DO PWM 20 kHz

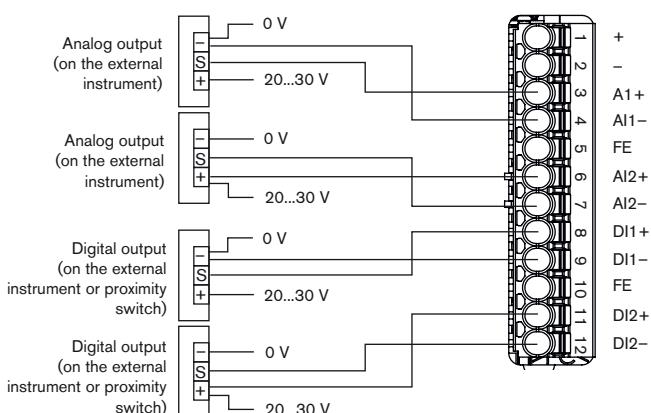

## Pin Assignment and wiring, continued

**2AI/2DI**

Pin	Pin assignment	External circuit
1	+	20-30 V / 2 A max. OUTPUT no galvanic isolation
2	-	20-30 V / 2 A max. OUTPUT no galvanic isolation
3	AI1+	+ (0/4-20 mA, 0-2/5/10 V) Input galvanically isolated
4	AI1-	- (0/4-20 mA, 0-2/5/10 V) Input galvanically isolated
5	FE	Shielding
6	AI2+	+ (0/4-20 mA, 0-2/5/10 V) Input galvanically isolated
7	AI2-	(0/4-20 mA, 0-2/5/10 V) Input galvanically isolated
8	DI1+	+ (ON: 5-35 V, OFF: > 2 V) Input galvanically isolated
9	DI1-	- (ON: 5-35 V, OFF: > 2 V) Input galvanically isolated
10	FE	Shielding
11	DI2+	+ (ON: 5-35 V, OFF: > 2 V) Input galvanically isolated
12	DI2-	- (ON: 5-35 V; OFF: > 2 V) Input galvanically isolated

**2AI, 2DI: 2-wire**

External configuration 2AI, 2DI, 2-wire

**2AI, 2DI: 3-wire**

External configuration 2AI, 2DI, 3-wire

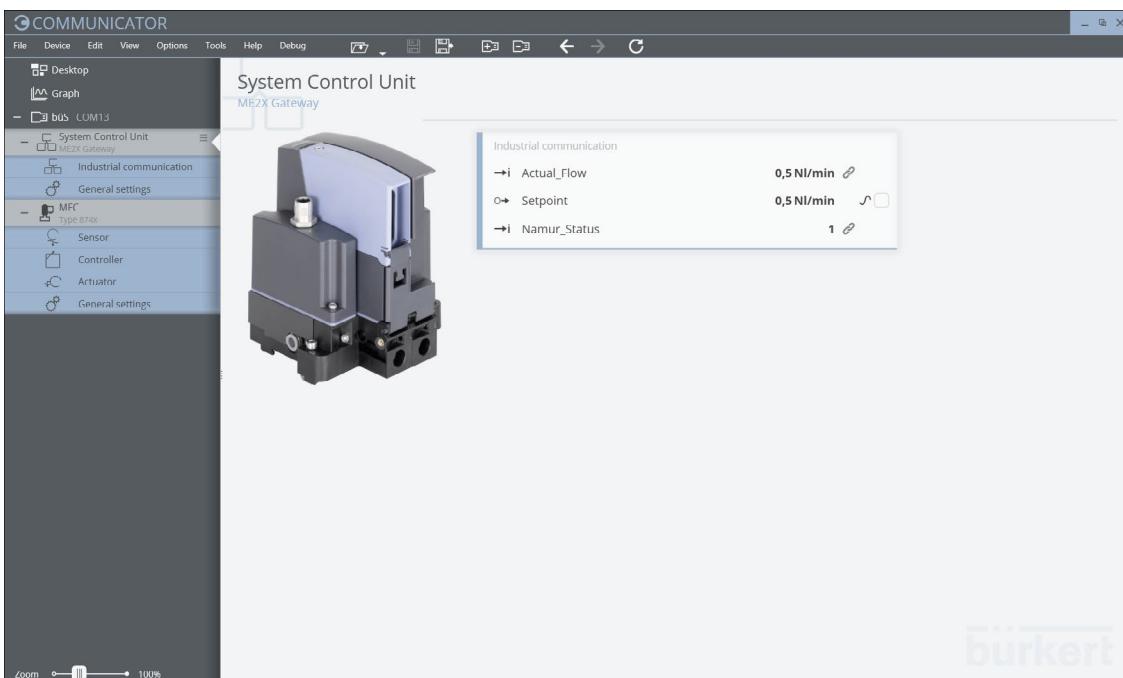

## Software Bürkert Communicator

The Bürkert Communicator is the most important software component of the 'Efficient Device Integration Platform' (EDIP). Various features of this universal tool simplify the configuration and parameterization of devices equipped with a digital CANopen based interface. With this tool the user has a complete overview of cyclic process values as well as acyclic diagnosis data. In the near future, an integral part of the Communicator will be a graphical programming environment which will help in creating decentralized sub-system control functions. The connection to the PC is established with a USB-CAN adapter.

The communicator allows:

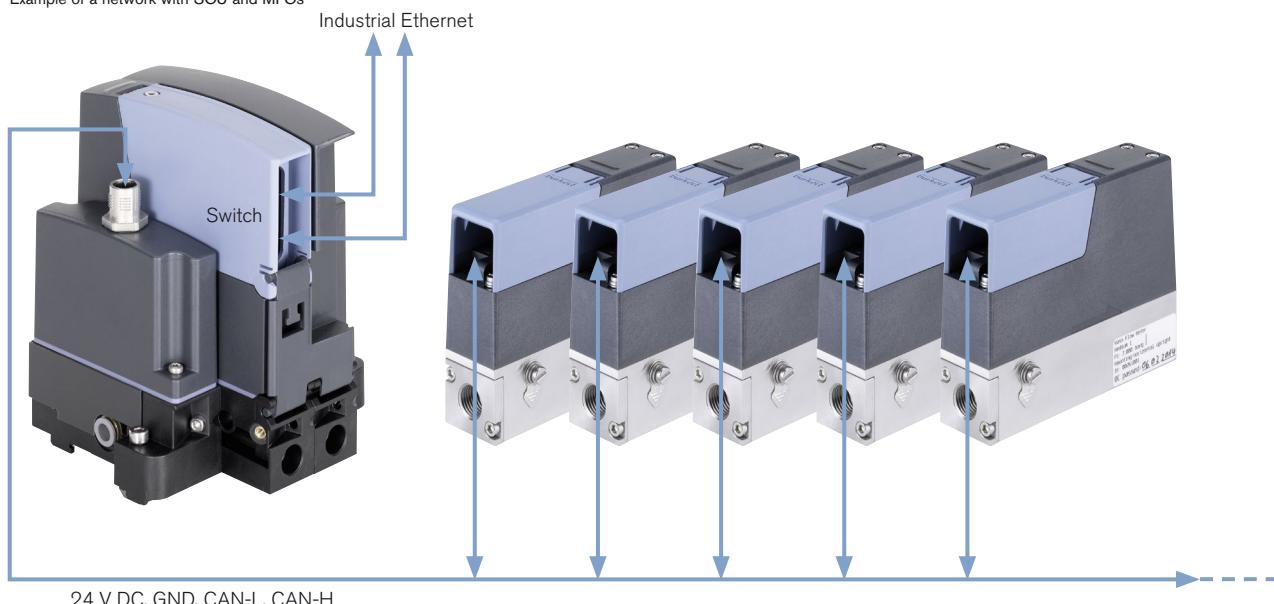

- Configuration, parameterisation and diagnosis of EDIP devices / networks
- Easy and comfortable mapping of cyclic values
- Graphical display of process values
- Firmware update for the connected EDIP devices
- Backup and restoring of device configurations
- Recalibration routine controlled

To install the software, click on the download button.

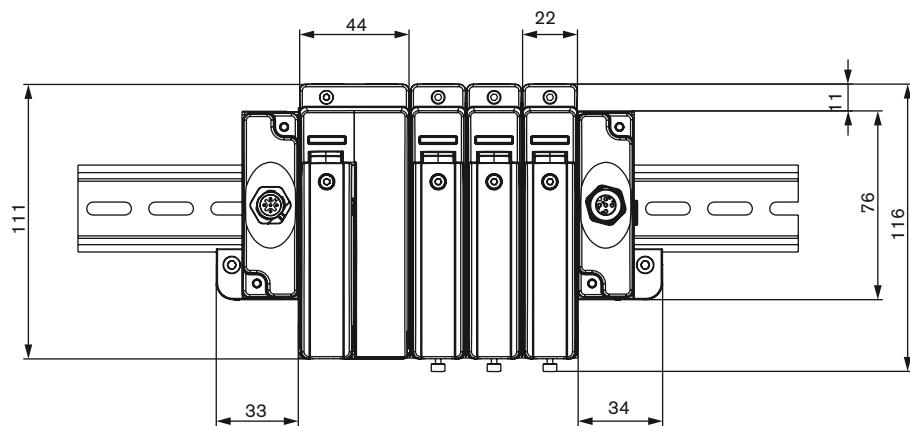

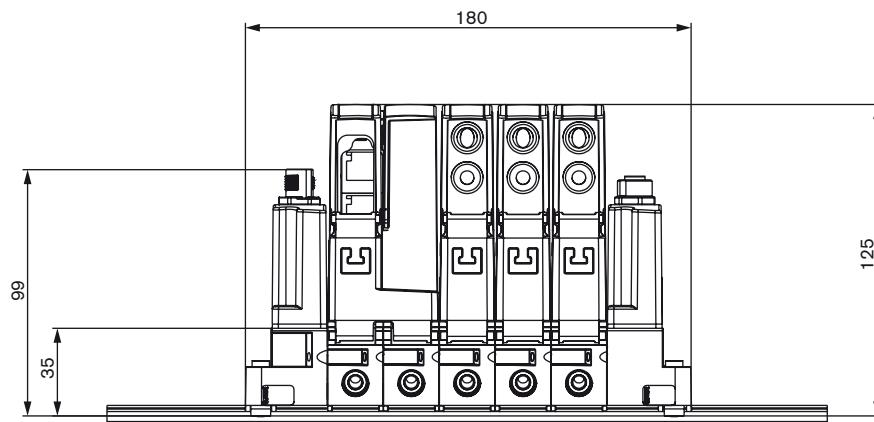

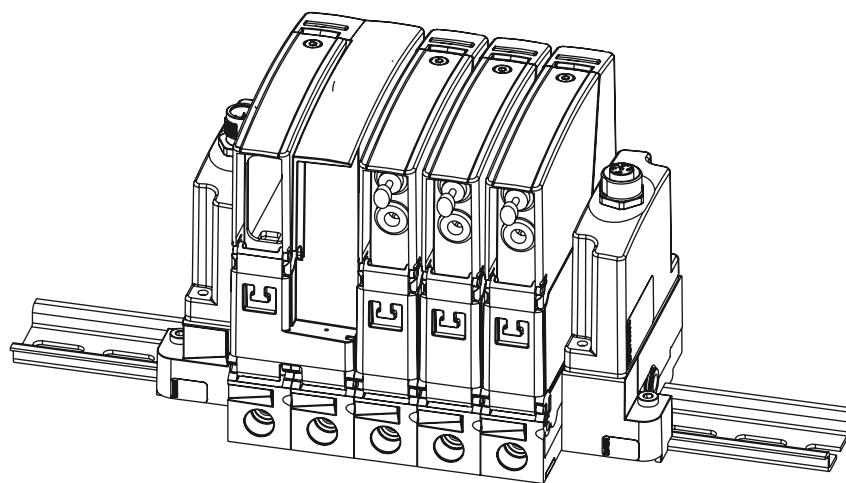

## Networking
